Career Objective / Profile

Passionate AI engineer with strong skills in ML, databases, and programming. Interested in developing intelligent systems and real-world AI solutions. Seeking opportunities to apply AI techniques to solve real-world challenges and drive technological innovation.

Education

IIU, Islamabad — BS Information Technology (CGPA: 3.14)	Aug 2023 – Jun 2027
KIPS College — FSC (Biology) — 83%	Aug 2021 – Jun 2023
The Stairs — General Sciences (Bio) — 92%	Mar 2011 – Jun 2021

Skills

- Programming Languages: Python, C, C++, Java, JavaScript, HTML, CSS, SQL
- Web Development: HTML, CSS, JavaScript
- Databases: MySQL, MongoDB, SQL Server
- Tools and Platforms: Kali Linux, Visual Studio Code, Visual Studio, Eclipse, Jupyter Notebook, MySQL Workbench
- Analytical and Soft Skills: Problem Solving & Critical Thinking
- Languages: English, Urdu, Turkish (Basic), German (Basic)

Experience / Internships

1. Volunteer, Alkhidmat Foundation, Islamabad

March 2025 - April 2025

 - Assisted in organizing activities and workshops for individuals with disabilities, supporting community engagement.
 - Gained hands-on experience in volunteer management, teamwork, and program coordination.
2. Lab Demonstrator - Data Structures and Algorithms, IIU, Islamabad

February 2026 – Present

 - Guided students on linked lists, trees, and graphs during lab sessions.
 - Evaluate students’ lab tasks and quizzes, providing constructive feedback to enhance coding practices.

Projects / Research

1. Disease Prediction System

November 2025

 - Objective: Develop a diagnostic tool to predict the likelihood of chronic diseases (e.g, Diabetes) based on clinical parameters.
 - Outcome: Built an end-to-end web application using XGBoost for high-accuracy classification; implemented real-time prediction features and automated data preprocessing pipelines. • Tools: Python, Scikit-learn, XGBoost, Pandas, Streamlit.
2. Credit Default Prediction App

June 2025

 - Objective: Build a financial risk assessment model to predict the probability of credit card defaults.
 - Outcome: Utilized the UCI Credit Card dataset to train a robust model; integrated SMOTE for handling class imbalance and achieved reliable forecasting through feature scaling and hyperparameter tuning. • Tools: Python, Streamlit, XGBoost, SMOTE, Scikit-learn, Joblib.
3. Mobile Shop Data Warehouse

April 2025

 - Objective: Develop a robust relational database system to manage sales, inventory, and customer records for a local mobile retail business.
 - Outcome: Designed a normalized schema with 10+ tables using Primary and Foreign keys; implemented complex Nested Queries and Multi-table Joins to generate 5 comprehensive analytical reports, including sales progress and customer purchase history.
 - Tools: MySQL Workbench, SQL, Relational Data Modeling.

Achievements / Extracurricular Activities

- Medal Recipient, KIPS College — 2023
- Organized Tech Seminar Series at University hosting 10+ speakers from different tech fields — 2024.
